

Implement the “**Candidates_2022**” class that is derived from the “**Candidates**” class so that the following output is generated.

```
class Candidates:
    candidates={}
    candidateNo = 0
    def __init__(self,name,add,phoneNo,exp,dob):
        self.name = name
        self.address = add
        self.phoneNo = phoneNo
        self.experience = exp
        self.dateOfBirth = dob

    def addCandidate(self,info):
        Candidates.candidates[self.ID]= info
    def __str__(self):
        return "Name: {}\nAddress: {}\nPhone No:
{}\nExperience: {}\nDate of Birth:
{}".format(self.name,self.address,self.phoneNo,self.
experience,self.dateOfBirth)
#Write your code here

print("Number of candidates:",Candidates.candidates)
