

Implement **Crewmate** and **Imposter** classes that are derived from the **AmongUsPlayer** class so that the following output is generated.

```
class AmongUsPlayer:
    __player_onboard = 0

    def __init__(self, name, color):
        AmongUsPlayer.__player_onboard =
AmongUsPlayer.__player_onboard + 1
        self.__name = name
        self.__color = color
        self.__is_alive = True

    def get_player_details(self):
        return f'Player Name: {self.__name}\nPlayer
Color: {self.__color}\nPlayer Alive:
{self.__is_alive}'

    @classmethod
    def get_spaceship_details(cls):
        return f'Current Players Onboard:
{cls.__player_onboard}'

    def get_player_status(self):
        return self.__is_alive

    def reset_player(self):
        self.__is_alive = False

# Write your code here

crew1 = Crewmate('Robert', 'Red')
imposter1 = Imposter('Blake', 'Black')

print(crew1.get_player_details(), '\n')
print(imposter1.get_player_details())
print('#####')

crew2 = Crewmate('George', 'Green')
```

## Output

Player Name: Robert  
Player Color: Red  
Player Alive: True  
Task Count: 0

Player Name: Blake  
Player Color: Black  
Player Alive: True  
Kill Count: 0

#####  
Current Players Onboard: 3  
Among them, 2 crewmates.

Current Players Onboard: 4  
Among them, 2 SUS.

#####  
Task done successfully.  
Crewmate killed successfully.  
Player is not alive.  
Don't kill an Imposter.  
Task done successfully.  
Crewmate already dead.

#####  
Current Players Onboard: 4  
Among them, 2 crewmates.

Current Players Onboard: 4  
Among them, 2 SUS.

Player Name: George  
Player Color: Green  
Player Alive: True  
Task Count: 2

Player Name: Brian  
Player Color: Blue  
Player Alive: True  
Kill Count: 1

```
print(Crewmate.get_spaceship_details(), '\n')

imposter2 = Imposter('Brian', 'Blue')
print(Imposter.get_spaceship_details())
print('#####')

crew2.do_task()
imposter2.kill_crewmate(crew1)
crew1.do_task()
imposter2.kill_crewmate(imposter1)
crew2.do_task()
imposter1.kill_crewmate(crew1)
print('#####')

print(Crewmate.get_spaceship_details(), '\n')
print(Imposter.get_spaceship_details(), '\n')

print(crew2.get_player_details(), '\n')
print(imposter2.get_player_details())
```
