

Implement the “**ElitePokemon**” class that is derived from the “**Pokemon**” class so that the following output is generated.

```
class Pokemon:
    def __init__(self,name,hp,characterType):
        self.__name = name
        self.__hp = hp
        self.__characterType = characterType

    def getHp(self):
        return self.__hp

    def getMoves(self):
        return "\nBasic move : " + "Quick Attack"

    def __str__(self):
        return "Name: " + self.__name + "\nHit points: " +
+ str(self.__hp) + "\nCharacter Type: " +
self.__characterType

#Driver Code
Corphish =
ElitePokemon.createPokemon('Corphish',['Bubble
beam'])
print('Number of elite
Pokemon',ElitePokemon.numberOfElitePokemon )
print(Corphish)
print(Corphish.getMoves())
print('*****')
Pikachu =
ElitePokemon('Pikachu',150,'Electric','Water',['Thun
der shock','Thunderbolt'])
print(Pikachu)
print('*****')
Mewtwo =
ElitePokemon('Mewtwo',180,'Psychic','Electric',['Psy
cho Cut','Ice Beam'])
print(Mewtwo)
print(Mewtwo.getMoves())
print('*****')
Charizard =
```

```
